

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application. Please amend claims 1, 9 and 16-18 as follows:

Listing of Claims:

Claim 1 (Currently Amended): A detachable unit detachable to an image forming apparatus,

the detachable unit comprising a memory part storing information containing control information, and

upon mounting the detachable unit on an image forming apparatus main member, operation of the image forming apparatus being controlled based on the information stored in the memory part,

wherein the control information stored in the memory part is capable of being updated while the detachable unit is detached from the image forming apparatus main member.

Claim 2 (Original): The detachable unit as claimed in claim 1, wherein the memory part of the detachable unit stores control information corresponding to a destination of the detachable unit.

Claim 3 (Currently Amendment): The detachable unit as claimed in claim 1, wherein the control information stored in the memory part of the detachable unit is updated i times ($1 \leq i \leq n$, where i and n each represent a natural number) corresponding to n -th destinations of from a manufacturer to an end customer of the detachable unit.

Claim 4 (Canceled).

Claim 5 (Original): The detachable unit as claimed in claim 1, wherein the detachable unit has a reception part for receiving an external signal, and the control information stored in the memory part is updated based on the signal received by the reception part.

Claim 6 (Original): The detachable unit as claimed in claim 1, wherein the control information stored in the memory part is updated at least once from an initial state.

Claim 7 (Original): The detachable unit as claimed in claim 1, wherein the memory part of the detachable unit stores specification information showing specification of the detachable unit.

Claim 8 (Original): The detachable unit as claimed in claim 1, wherein the memory part of the detachable unit stores use history information showing use history of the detachable unit.

Claim 9 (Currently Amended): An image forming apparatus comprising an image forming apparatus main member, a detachable unit detachable to the image forming apparatus main member, and a control means for controlling operation of the image forming apparatus, the detachable unit comprising a memory part storing information containing control information, and

the control means controlling operation of the image forming apparatus based on the information stored in the memory part,

wherein the control information stored in the memory part is capable of being updated while the detachable unit is detached from the image forming apparatus main member.

Claim 10 (Original): The image forming apparatus as claimed in claim 9, wherein the detachable unit is a fixing unit for fixing a toner image formed on a recording sheet, and

the control means controls operation of the fixing unit based on the information stored in the memory part.

Claim 11 (Original): The image forming apparatus as claimed in claim 9, wherein the detachable unit is an image forming unit for forming a toner image on a recording sheet,

the image forming apparatus main member comprises a fixing unit for fixing the toner image formed on the recording sheet, and

the control means controls operation of the fixing unit based on the information stored in the memory part.

Claim 12 (Original): The image forming apparatus as claimed in claim 9, wherein the image forming apparatus has an output means for outputting information to a user,

the memory part stores, as the control information, delivery agent information showing delivery agent of the detachable unit, specification information showing specification of the detachable unit and use history information showing use history of the detachable unit, and

in the case where it is decided that a time for replacement of the detachable unit approaches based on the specification information and the use history information, the control means outputs the delivery agent information to the output means.

Claim 13 (Original): The image forming apparatus as claimed in claim 9, wherein the memory part stores advertisement information showing advertisement as the control information, and

the control means prints the advertisement information on a recording sheet upon forming an image.

Claim 14 (Original): The image forming apparatus as claimed in claim 13, wherein the image forming apparatus has an input means for inputting information from a user, and

the control means prints the advertisement information on a recording sheet based on a preference of the user input from the input means.

Claim 15 (Original): The image forming apparatus as claimed in claim 13, wherein the image forming apparatus has an accounting means for accounting corresponding to a number of times of image formation, and

the control means reduces the account in the case where the advertisement information is printed upon forming an image.

Claim 16 (Currently Amended): A server computer capable of communicating with plural client computers through an information communication network,

the server computer storing control information corresponding to the client computers and transmitting the control information to the client computers, and

the control information being information that controls an image forming apparatus, wherein the control information is transmitted to a detachable unit detachable to the image forming apparatus and is capable of being updated while the detachable unit is detached from the image forming apparatus.

Claim 17 (Currently Amended): A computer program for a server computer capable of communicating with plural client computers through an information communication network,

the computer program transmitting control information stored in the server computer to a client computer, and

the control information being information that controls an image forming apparatus, wherein the control information is transmitted to a detachable unit detachable to the image

forming apparatus and is capable of being updated while the detachable unit is detached from the image forming apparatus.

Claim 18 (Currently Amended): A client system comprising a client computer capable of communicating with a server computer through an information communication network, and a writing device for writing control information obtained from the client computer on a memory part of a detachable unit detachable to an image forming apparatus, and

the control information being transmitted from the server computer to the client computer through an information communication network and being information that controls the image forming apparatus, wherein the control information stored in the memory part is capable of being updated while the detachable unit is detached from the image forming apparatus.
